ABSTRACT OF THE DISCLOSURE

Systems and methods for managing interaction with a presentation of a tree structure in a graphical user interface are provided. Briefly described, one such method comprises the steps of: displaying a tree structure on a first portion of a graphical user interface; receiving a search request for an object in the tree structure having a predefined value via a second portion of the graphical user interface; displaying a search result in a third portion of the graphical user interface, the search result comprising one or more locations that satisfy the search request; and in response to selection of one of the locations, modifying the tree structure to display the selected location of the object having the predefined value.
